# JACK SENECHAL

## TECHNOLOGY EXECUTIVE · ENGINEERING & PLATFORM LEADERSHIP

**Located in Novato, CA**
Phone: 415-779-2701
Email: jacksenechal@gmail.com
GitHub: github.com/jacksenechal
LinkedIn: linkedin.com/in/jacksenechal

## SUMMARY

Engineering and platform leader with 6+ years leading teams, and a repeat founder across product and infrastructure. Built the platforms and teams that organizations run on.

- **Modernization at scale**: led a multi-year transformation of a legacy monolith and its entire service and server estate onto cloud-native, infrastructure-as-code tooling (Kubernetes, Terraform, Ansible), and built up the DevOps team that carried it into a group that could sustain it.
- **Governance and standards**: set the standards and shared platform an entire engineering organization ran on, and made them stick by building them with the teams that used them, central where it counted and autonomous everywhere else.
- **Developing leaders**: grew multiple junior engineers into senior software engineer and engineering manager roles. Top Performer Award, 2021.
- **AI with governance**: co-founder and fractional CTO of Building Humane Technology, a public benefit corporation behind the open-source HumaneBench; building with AI daily, with independent review, testing, and supply-chain scanning enforced by the system rather than left to good intentions.

## PROFESSIONAL EXPERIENCE

**Independent Consultant · AI-Native Software Delivery**
Client engagements | May 2026 - Present | Remote

*Scope: designs the delivery process and governance model; owns product and prioritization.*

- Designing and running AI-assisted delivery pipelines that carry engineering work from requirement to production, with a human accountable for scope, priority, and acceptance.
- **Governance built into the system**: every change passes an independent reviewer, automated testing, supply-chain security scanning, and a deployment verification step.
- Using a single durable system of record for work intake, review, and status, with status derived from verifiable reality rather than maintained by hand in a tracker nobody trusts.
- Practical view of where AI adoption pays off and where it does not, grounded in running it daily rather than in vendor claims.

**Co-founder & Fractional CTO**
Building Humane Technology | June 2025 - Present | Remote (part-time)

*Scope: technical direction and roadmap for a public benefit corporation's engineering team.*

- Originated and co-architected HumaneBench.ai, an open-source framework for evaluating whether AI systems behave in the public interest, covering transparency, privacy, and user wellbeing.
- Fractional CTO to the team that built and maintains it, shaping architecture, scoring design, multi-provider support, documentation, and positioning.
- Designing and building a real-time evaluation classifier that scores AI behavior against those standards inline at sub-100ms.
- Designing telemetry for operational visibility and evaluation feedback loops.
- Curating the technical roadmap: production monitoring, multi-turn evaluation, adoption maturity models.

**Co-founder & Software Engineer**
Alchemy Astrology (formerly Mirror Astrology) | Nov 2024 - Jul 2026 | Remote

*Scope: co-founder; owned front-end and design delivery, including outside design contractors.*

- Owned front-end and design delivery for a production consumer subscription service, and managed freelance designers through to shipped work.

- Collaborated on back-end delivery: payment processing, single sign-on authentication, and application architecture.
- Partnered with co-founders on product direction, roadmap, and prioritization.

**Infrastructure Engineer**
Tobiko | Mar 2024 - Oct 2024 | Remote

*Scope: cloud platform serving production customer workloads.*

- Architected and operated a cloud platform running production customer workloads, with reliability, security, and repeatability as the standard.
- Implemented infrastructure as code so environments were provisioned from reviewed, version-controlled definitions instead of by hand.
- Stood up a customer support and incident response workflow, and onboarded staff and customers onto it.

**Engineering Manager / Principal Software Engineer**
Mavenlink / Kantata | Apr 2017 - Dec 2023 | San Francisco, CA

*Scope: hired as a Senior Software Engineer, leading teams within a few months, and promoted to Principal for the infrastructure turnaround. Led two engineering teams for close to seven years, including the shared infrastructure platform relied on by every engineering team in the company. Partnered with product, security, and application groups on standards adopted organization-wide.*

- **Internal Infrastructure Platform modernization** (4 yrs): Led a multi-year transformation of a long-lived codebase and its server estate onto cloud-native, infrastructure-as-code tooling, replacing hand-built systems with reproducible, auditable configuration. Migrated the core application and its surrounding services onto a modern container platform, and moved an unstable production database onto a managed service, eliminating an entire class of outages. Made migration decisions on scale, cost, and consistency grounds.
- **Team rebuild and engineering governance**: Took over a team reduced to a single engineer by mass departures and rebuilt it: recruiting, onboarding, documented practice, and an on-call rotation the team could sustain. Led the organization's engineering-practice transformation as change agent and technical authority across the company, setting standards other teams adopted because they worked, not because they were mandated. Owned roadmap, intake and triage of requests from every engineering team, and priority tradeoffs among them.
- **M-Bridge Integration Platform** (2.5 yrs): Took over an unreliable agent-based integration platform connecting the SaaS to customer systems (Salesforce, HRIS, accounting) and led its rearchitecture into a dependable one. Cut error rates roughly 100x by instrumenting the system and fixing what the data pointed at. Executed a zero-downtime migration from Heroku to Google Cloud (GKE and Cloud SQL), including relational, document, and cache stores.
- **Reliability and sustainable operations**: Drove a sustained push that dramatically reduced after-hours incident volume; strong retention and good working relationships across the engineering organization followed.
- **Analytics data pipeline**: Led a transition team that took ownership of a neglected analytics pipeline and modernized it.
- **Developing people**: Grew multiple junior engineers into senior software engineer and engineering manager roles, and mentored engineers across teams. Led interviewing and hiring. Top Performer Award, 2021.

**Lead Developer, Co-founder**
Pegg | 2014 - 2017 | San Francisco, CA

- Co-founded and led development of a cross-platform mobile product from scratch.
- Established the engineering workflow the team ran on: peer review, automated testing, and continuous delivery.
- Co-led product strategy, monetization, and launch planning.

**Earlier Career (2001 - 2014)**

Full-stack consulting and lead roles in Ruby on Rails, Node.js, and D3 (OpenTest Pro, Turnbull & Asser e-commerce). Introduced automated testing and CI at OnForce. Architected the initial release of mynewsletterbuilder.com and built its dev team at JBA Network.

## LEADERSHIP PRACTICE

- **Governance and standards**: policy, review gates, change control, and documented practice, set centrally and adopted willingly because they reduce work rather than add it.
- **Modernization**: legacy system replacement, cloud migration, data platform migration, phased cutover planning, zero-downtime delivery.
- **Operations**: monitoring and alerting, incident response and postmortems, on-call design, disaster recovery, security posture and access management.

- **Vendor and cost discipline**: platform and vendor selection on cost, risk, and long-term maintainability; consolidation onto managed services where it lowers total cost of ownership.
- **People**: hiring and team building, coaching, succession through growing individual contributors into senior and management roles, cross-functional partnership, change management.
- **Communication**: translating technical risk and tradeoffs into terms non-technical stakeholders can decide on.
- **Technical depth**: cloud platforms (AWS, Google Cloud), Kubernetes and containers, infrastructure as code (Terraform, Ansible), CI/CD, relational and document databases, API and systems architecture, AI and LLM systems.

## EDUCATION

**BA in Mathematics, minor in Computer Science**
University of North Carolina at Asheville | May 2003

- Graduated with distinction in Mathematics. Undergraduate research in 4D fractals.

## SELECTED OPEN SOURCE

- **HumaneBench**: open-source framework for evaluating human-friendly behavior in AI assistants, covering transparency, privacy, and wellbeing.
- **Scan MCP**: privacy-first document digitization tooling.

## RECOMMENDATIONS

"Jack has had quite a profound impact on my career. As a young engineer, I was fortunate enough to work with Jack as my coach. He served as a great mentor, helping me build both technical and professional skills and forming me into the engineer that I am today. Throughout our time together, Jack was caring and invested in helping me set goals and develop my career. His mentorship was a key factor in elevating myself from an incoming Junior Engineer to an Engineering Manager. Jack has a great curiosity and a strong set of technical capabilities that allow him to serve as a great example for others and a key contributor to any team!"

*— Wesley Morlock, Engineering Director, Kantata*

"Jack is an exceptional engineer and leader. He strives to deeply understand the technology he's working on while remaining cognizant of the socio-technical components that may be a factor in any project. He's thorough, detail-oriented, and outcome-oriented, which means the solutions he architects, builds, and collaborates on come out better. Jack also strives to be at the forefront of new technology and assess how he can leverage it. Newer tech like GenAI can be complex and ever-evolving, and Jack is not one to back down but step up and embrace. He does all this with a strong team mentality, is a phenomenal team player, and can effectively delegate to help lift others' skill sets."

*— Brandon Clifford, Director of DevOps, Kantata*
