

JACK SENECHAL

ENGINEERING LEADER / ENTREPRENEUR

Located in Novato, CA

Phone: 415-779-2701

Email: jacksenechal@gmail.com

GitHub: github.com/jacksenechal

LinkedIn: linkedin.com/in/jacksenechal

SUMMARY

Full-stack engineering leader and founder with a strong record shipping production software and infrastructure, mostly at startups. No big-company detour.

- **AI-native delivery:** runs agent-driven “software factories” that carry engineering work from spec to shipped, with harness-enforced SDLC discipline so agents move fast without breaking things.
- **Platform builder:** designs internal tools and shared primitives other teams build on, from integration middleware to self-serve tooling.
- **Turnaround leader:** rearchitected an unreliable integrations platform for **~100x error reduction** and led a **zero-downtime** Heroku to Kubernetes/RDS migration.
- **Founder, repeatedly:** multiple co-founding ventures spanning product, infrastructure, and launch.
- **Owns outcomes:** a rescuer of burning platforms, at home with incomplete information, able to bring stakeholders and engineers to clarity.

INDUSTRY EXPERIENCE

Independent Consultant · AI-Native Software Delivery

Client engagements | May 2026 - Present | Remote

- Running “software factories”: agent-driven delivery pipelines that carry engineering work from spec to shipped, human in the product seat. **Speed without fragility:** production-quality output over long-horizon iteration, where agentic development typically falls down.
- **Core thesis:** the same DevOps and project-management discipline that makes human teams work is the necessary and sufficient foundation for agent teams, encoded into the harness and context.
- **GitHub as coordination substrate:** issues, PRs, and Projects as the single ledger. Harness-enforced SDLC (independent fresh-context reviewer, green CI, supply-chain scanning, deployment smoke check) so agents move fast without breaking things.
- **Self-improving harness:** orchestration agents run, observe, and refine the process, converging on and shipping their own refinements.
- Chose **React, TypeScript, and Next.js** stack: their tooling and feedback loops are very tractable for agents to work in.
- **Product ownership:** rapid prototyping, requirements gathering, defining and prioritizing the work, and verifying output against deployed previews on behalf of a non-technical user base.

Co-founder & Fractional CTO

Building Humane Technology | June 2025 - Present | Remote (part-time)

- Originated and co-architected HumaneBench.ai, an open-source AI evaluation framework built on AISI Inspect. **Python.**
- Fractional CTO to the team that built it into a published, externally usable product, shaping architecture, scoring design, multi-provider support, documentation, and positioning.
- Built a low-latency proof-of-concept classifier scoring model behavior against HumaneBench rubrics inline at **sub-100ms**, suitable for a production request path rather than batch only.
- Designs telemetry for operational visibility and evaluation feedback loops informing system-prompt iteration and fine-tuning. Owns the technical roadmap: production monitoring, multi-turn evaluation, adoption maturity models.

Co-founder & Software Engineer

Alchemy Astrology (formerly Mirror Astrology) | Nov 2024 - Jul 2026 | Remote

- Owned the front end of a production consumer subscription app: Rails views, JavaScript, HTML/CSS, Tailwind, responsive UI/UX.

- Led design and UX delivery: worked directly with freelance designers, translated Figma into the Rails framework. Collaborated on the back end: Rails MVC, Stripe subscription billing, SSO authentication.
- Made product and prioritization calls with co-founders: roadmap, scope, what to ship next.

Infrastructure Engineer

Tobiko | Mar 2024 - Oct 2024 | Remote

- Architected and implemented a cloud platform serving customer workloads at an early-stage startup. **Python**, Pulumi, GCP, GKE, Cloud Run, Helm.
- Built CI/CD primitives the rest of engineering used: mono-repo conditional workflows, workload identity federation, continuous delivery.
- Owned build-vs-buy for support and incident response: selected incident.io for incident management; after support tooling review found nothing that handled Slack-based support cleanly, built the Slack support agent from the ground up in Python and onboarded teammates and customers onto it.

Engineering Manager / Principal Software Engineer

Mavenlink / Kantata | Apr 2017 - Dec 2023 | San Francisco, CA

- **M-Bridge Integration Platform** (2 yrs): Took over an unreliable agent-based integration platform connecting the SaaS to customer systems (Salesforce, HRIS, accounting) and led its rearchitecture into a dependable one. **Cut error rates roughly 100x** by instrumenting the system and fixing what the data pointed at. Executed a **zero-downtime migration** from Heroku to Kubernetes and RDS, including relational, document, and cache stores.
- **Internal Infrastructure Platform** (4 yrs): Built a new team from scratch whose product was the platform the entire engineering org built on. Ran it as a service org with internal customers: consulted with teams on their workflows, triaged requests, and turned recurring one-off asks into shared primitives and self-serve tooling so teams could ship without waiting on us. Owned the roadmap while staying hands-on in code, architecture, and review. Migrated a large legacy Rails monolith and its service ecosystem to cloud-native infrastructure (Terraform, Ansible, Kubernetes).
- Rebuilt the team after mass departures: inherited a two-person DevOps team with one member two weeks from leaving, rebuilt hiring, onboarding, documentation, and on-call practice into a stable team with strong developer relations.
- Led a transition team that took ownership of the BI/analytics pipeline and migrated it to Kubernetes.
- Shipped **React** features in the customer-facing product and worked in its **Redux** state management, alongside the platform and infrastructure work.
- Grew multiple junior engineers into senior SWE and Engineering Manager roles; led interviewing and hiring. **Top Performer Award, 2021.**

Lead Developer, Co-founder

Pegg | 2014 - 2017 | San Francisco, CA

- Designed, architected, and built a cross-platform mobile app from scratch for iOS and Android. Node.js backend, JavaScript frontend with **Redux** state management, Firebase real-time systems, CI/CD to AWS/CloudFront via CircleCI.
- Established the engineering workflow from nothing (pair programming, automated testing, CI, rapid deployment) and co-led product strategy, monetization, and launch planning.

Earlier Career (2001 - 2014)

Full-stack consulting and lead roles in Ruby on Rails, Node.js, and D3 (OpenTest Pro, Turnbull & Asser e-commerce). Introduced automated testing and CI at OnForce. Architected the initial release of mynewsletterbuilder.com and built its dev team at JBA Network.

OPEN SOURCE PROJECTS

Scan MCP (2024 - Present): MCP server giving AI agents control of document scanners. Privacy-first architecture, device discovery, JSON Schema validation, stdio and HTTP transports. **TypeScript/Node.js**. github.com/jacksenechal/scan-mcp

HumaneBench (2024 - Present): Open-source LLM evaluation framework built on AISI Inspect. See Building Humane Technology above. **Python**. github.com/buildinghumanetech/humanebench

SKILLS

- **Languages & Frameworks:** Python, TypeScript, JavaScript, React, Vue, Node.js, Ruby on Rails, Bash, HTML, CSS, Tailwind.
- **Front-end:** responsive design, UI/UX collaboration with designers, Figma handoff.

- **Back-end & Data:** API design, microservices, distributed systems, PostgreSQL, MySQL, MongoDB, Redis, Stripe, SSO/auth.
- **AI/LLM:** LLM evaluation frameworks (AISi Inspect), MCP servers, chatbot development, prompt engineering, context augmentation, agentic coding workflows.
- **Infrastructure & CI/CD:** AWS, GCP, Kubernetes, Docker, Terraform, Pulumi, Ansible, Helm, GitHub Actions, CircleCI, infrastructure as code, automated testing, TDD.
- **Product:** Roadmap ownership, product discovery with users, prioritization, scope negotiation, cross-functional collaboration.
- **Leadership:** Team building, hiring, coaching and mentoring, roadmap ownership, org change management, stakeholder engagement.

EDUCATION

BA in Mathematics, minor in Computer Science

University of North Carolina at Asheville | May 2003

- Graduated with distinction in Mathematics. Undergraduate research in 4D fractals.

RECOMMENDATIONS

“Jack is **an exceptional engineer and leader**. He strives to **deeply understand the technology** he’s working on while remaining cognizant of the socio-technical components that may be a factor in any project. He’s thorough, detail-oriented, and outcome-oriented, which means **the solutions he architects, builds, and collaborates on come out better**. He does all this with a **strong team mentality**, is a phenomenal team player, and can **effectively delegate to help lift others’ skill sets**.”

— *Brandon Clifford, Director of DevOps, Kantata*

“Jack has **had quite a profound impact on my career**. As a young engineer, I was fortunate enough to work with Jack as my coach. He served as a great mentor, helping me build both technical and professional skills and **forming me into the engineer that I am today**. His mentorship was a key factor in elevating me from an incoming Junior Engineer to an Engineering Manager.”

— *Wesley Morlock, Engineering Manager, Kantata*

“With Jack, **the more complex the problem, the more simple his solutions**. Master Senechal is more than a mind to be reckoned with, he’s an **integrative capacity builder** with a wide range of technological expertise. **If there is anything that can be done through web development, Jack can figure out how to do it, and make it happen**.”

— *Adam Apollo, Cofounder & CEO, Superluminal Systems*

“Jack has a flair for **finding better, faster, and more reliable ways to get things done**. He advocates best practices, like unit testing, and has a deep knowledge of OO architecture. **Jack thinks on his toes**, and will always be there with the team at 4 a.m. if circumstance requires it.”

— *Greg Whitescarver, Founder, Mojave*

“Jack is a fantastic engineer always ready to **help solve problems and more importantly, teach you how to solve them**. He guided me and my team through a bunch of challenging GitOps situations with patience and kindness, leading by example. Always diligent with his work, willing to roll up his sleeves to get things done and **find creative solutions**.”

— *Cesar Palafox Garza, Principal Software Engineer, Kantata*
